Wireless Display

Quick Installation Guide

Items Included

Tools Required

| Drill and Bit	Appropriate Anchors for Mounting Surface	Phillips Screwdriver

1 Install RF Modem

Mount RF modem to inside of control box. Connect antenna cable, wireless display cable and power supply.

2

Connect wireless display cable to connector marked inside control box, connect power to UPS, and route antenna cable through hole in the bottom of the control box.

3 Install Antenna

Mount antenna on top of the control box and connect antenna cable.

4 Install RAM Mount

Option 1: Diamond Base Plate

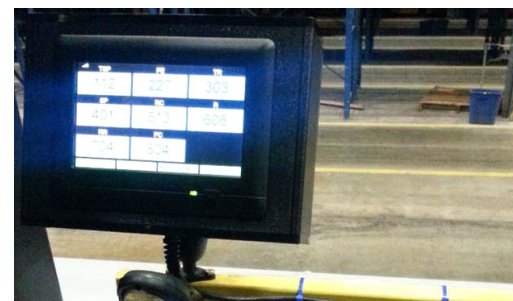

5 Install RAM Mount

Option 2: Optional Flat Base Plate
Useful for mounting with U-brackets

6 Connect Power

Route power cord and connect to either 110 Volt or 220 Volt receptacle.

7 Test the Signal Strength

If "Received" is not greater than 95, the antenna may need to be relocated to improve the signal strength.

See the iBOS® Pro Installation Manual for more detailed instructions.
